# 12. Ozone Depleting Substance (ODS)

This Product does not use the classIODS for any of production processes or for component parts.

#### 13. Handling Notes

#### 13-1 When dropped by mistake

The crystal products are designed and manufactured to satisfy the test criteria for shock and vibration. Be sure, however, to check the product's performance before use in the event that they receive excessive shock, for example, by dropping onto the floor.

#### 13-2 Mounting crystal units onto circuit board

When using an automatic loading mounter, test and confirm that no damage has been caused to the characteristics of crystal units before mounting. In case that the boards need to be separated after mounting crystal units, be careful that the bending stress does not affect the product characteristics or solder junction areas.

#### 13-3 Cleaning

- (1) Crystal products may be affected and destroyed at worst by ultrasonic cleaning. Be sure that your cleaning process does not affect the functionality of crystal product prior to use.
- (2) The use of inappropriate cleaning fluid may cause damages to crystal products. Please be sure to check suitability of the cleaning fluid in advance.

#### 13-4 Storage

Storage of crystal products under higher temperature or high humidity for a long term may affect frequency stability or solderability. Be sure to store the products under the normal temperature and humidity without exposing to direct sunlight and dew condensation. Storage period should be within 6 months if possible, and mount the products as soon as possible after unpacking.

#### 13-5 Replacement

If the defect is caused by our company within 12 months from the delivery time, we provide the replacement free of charge.
